Education

- **Atal Bihari Vajpayee Indian Institute of Information Technology and Management, Gwalior**
M.S. in Artificial Intelligence & Data Science (2025 – present)
- **Jai Parkash University, Saran**
B.Sc. Mathematics *March 2025*

Skills Summary

- **Languages:** Python, SQL
- **Data Science:** NumPy, Pandas, Scikit-learn
- **Deep Learning:** Artificial Neural Network (ANN), CNN
- **Data Visualization:** Matplotlib, Seaborn
- **Tools & Platforms:** Jupyter Notebook, Google Colab, VS Code, Git, GitHub, Streamlit
- **Other:** EDA, Feature Engineering, Model Evaluation

Projects

Agentic AI for Financial Sentiment Analysis

- Designed an agentic AI system that reads live financial news for any stock and automatically decides whether to BUY, SELL, or HOLD — without manual intervention.
- Three sentiment models (FinBERT, Groq LLM, TextBlob) vote on each headline together, so the final output is more reliable than any single model alone
- When the system is unsure, it routes the case to a human reviewer instead of guessing — making it safer for real-world use.
- Deployed on Streamlit Cloud with explainability charts so users can see exactly why a recommendation was made.

Sentiment Analysis on Amazon Kindle Reviews

- Performed sentiment analysis on Amazon Kindle Reviews dataset to classify customer reviews as positive or negative.
- Conducted extensive data cleaning, text preprocessing, and exploratory data analysis(EDA).
- Applied machine learning models using TF-IDF and Count Vectorizer features.
- Evaluated model performance using accuracy, precision, recall, and confusion matrix.

Artificial Neural Network for Binary Classification

- Designed and trained an ANN model using TensorFlow and Keras.
- Implemented Adam optimizer and Binary Cross-Entropy loss.
- Evaluated model performance using accuracy and loss metrics.
